Personal Career Guide

Team 10
Mentor: Deepa
Members: Vibha, Lipi, Shashank, Harshith

Problem Statement:
In the present-day education system students are given very little exposure to the different fields of interests to build their career in. With little knowledge about the different careers, students are in a time crunch and are forced to choose hastily relying on trivial facts like the salary income or job prospects.

Solution:
A personalized application to understand interests, find passion by asking questions at their grade level, providing info in the form of trivia or quizzes, and generating a viable list of career options based on their answers.

Milestone 1:
The Data set for the machine learning model will be completed. We plan to do this by Web Scraping (if there aren't datasets out there).
We also plan to have our questionnaire completed.

Milestone 2:
The machine learning model will be created.
Deploy the model Heroku using Django or Flask.

*The milestone goals might look a little different after the solidification of the idea
